This & super Keyword

Date: 16th Aug 2024

1.this keyword

        this keyword is use to access global variable from same/current class.

2. super keyword

        super keyword is use to access global variable from super class.

```java
package This_and_super_keyword;
//sub class
public class Sample1 extends Sample2
{
        //int a=30;      //global variable from super class

        int a=20;      //global variable from same class

        public void m1()
        {
                int a=10;          //local variable
                System.out.println(a);
                System.out.println(this.a);  //use to access global variable from same class
                System.out.println(super.a);  //use to access global variable from super class
        }

        public static void main(String[] args)
        {
                Sample1 s1=new Sample1();
                s1.m1();
        }
}

package This_and_super_keyword;
//super class
public class Sample2
{
        int a=30;      //global variable from super class
}
```
